Gadisa Teklu
Fullstack Developer

I am a web developer with expertise in Laravel and MERN stack. I love building websites and applications using these frameworks. I have good knowledge of databases like MySQL and MongoDB, which I use to create efficient data storage. I also have experience in creating APIs, which connect different systems and allow them to share information seamlessly. I take pride in delivering high-quality work on time and enjoy working collaboratively with clients. If you need a website, an API, or something in between, I'll be delighted to bring your ideas to life!

- Working as a full stack developer to enhance previous projects the company owned and also work on new projects using the latest and performant tools

Education

2018 - 2022
Adama Science and Technology University
Computer Science and Engineering

I have earned my degree in Computer Science and Engineering. During my study there, I have invested my time in getting to know technologies which are required by the industry, to be competent. The 5 year study at ASTU has taught me a lot both as a developer and a campus student.
